What is a Stokes Purple® Sweet Potato?

A relatively new and unique variety of sweet potato, with dark, vivid purple skin and vibrant purple flesh, grown and sold exclusively in Northern California by A.V. Thomas Produce. A.V. Thomas Produce has been based in Merced County since 1960, and sweet potatoes are their pride and passion. Manuel Vieira, along with his two sons Rick and Carlos, operate the family business with a deep connection to their local community and employees, many who have been with them for multiple generations.

What's the difference between a sweet potato and a yam?

Most people think that long, red-skinned sweet potatoes are yams, but they really are just one of many varieties of sweet potatoes. A true yam is generally imported to America from the Caribbean. It is rough and scaly and very low in beta carotene. Depending on the variety, sweet potatoes can vary from white to orange to purple. The orange-fleshed variety was introduced to the United States several decades ago. In order to distinguish it from the white variety everyone was accustomed to, producers and shippers chose the English form of the African word "nyami" and labeled them "yams."
